Member Behavior & Check-In Analysis

Marshall Martin
Data Analytics Project

‘Quin House

Tools Used

Python (Pandas)

- Data cleaning and transformation
- Feature engineering (time-based analysis)

Tableau

- Data visualization and dashboard creation
- Trend and pattern analysis

Excel / CSV Files

- Data storage and transfer between tools

Google Slides

- Presentation and storytelling of insights

Objective

The goal of this analysis is to understand member visitation behavior in order to improve operational efficiency, enhance member engagement, and identify opportunities for increased revenue.

This analysis focuses on:

- When members visit
- How they use the club
- Which members drive the most value

Data Overview

Data Source:

- Member check-in data

Key Fields:

- Scan Date (timestamp)
- Member Name
- Scan Location (Dining App vs Peoplevine Check-In)

Scope:

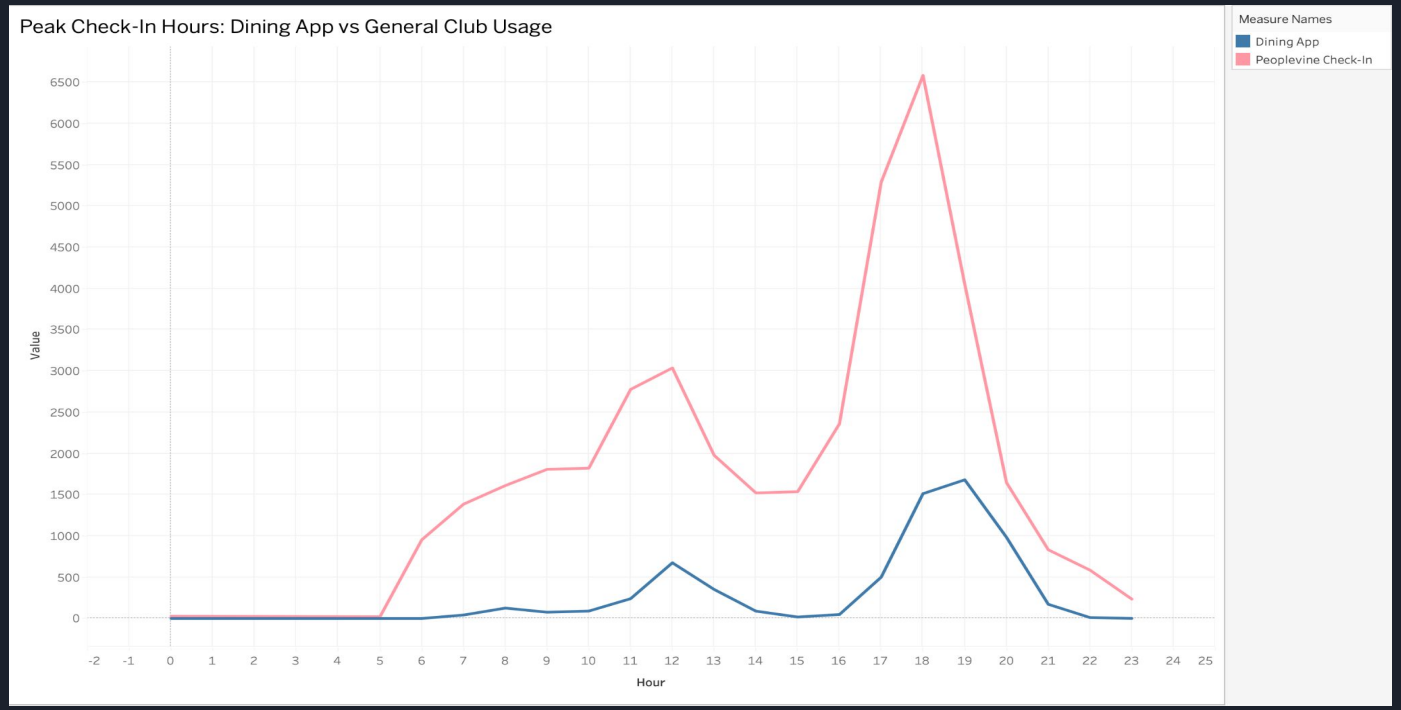
- Focused on identifying behavioral patterns without transaction data

Key Questions

- When are peak check-in times?
- What days drive the most activity?
- Which members are most engaged?
- Who may be at risk of churn?
- What drives visits: dining vs general usage?

Hourly Trends

- Dining activity peaks in the evening hours (dinner time)
- General check-ins are more distributed throughout the day
- Clear peak windows for staffing and valet demand



Member Segmentation

- Members fall into distinct behavioral groups:
  - Dining-Focused (revenue-driving)
  - Lounge-Focused (general usage)
  - Balanced users

High-Value Members

- Identified members with highest Dining App usage
- These members represent high-value engagement

Opportunity:

- Loyalty programs
- VIP experiences
- Targeted retention strategies

Churn Risk

- Members with low visit frequency and long inactivity periods identified

Opportunity:

- Targeted outreach
- Promotions or incentives
- Re-engagement campaigns

Least active members:

	member_name	total_visits
3946	Julie Ling	1
6959	Shaina Goodwin	1
5726	Moritz Flogel	1
3064	Jake Powers	1
5715	Morgan Conarro	1
1289	Charles Bradford Scott	1
5713	Morgan Abraham	1
5711	Mora Babineau	1
3072	James Bartz	1
3074	James Bildner	1

	member_name	total_visits	last_visit_date

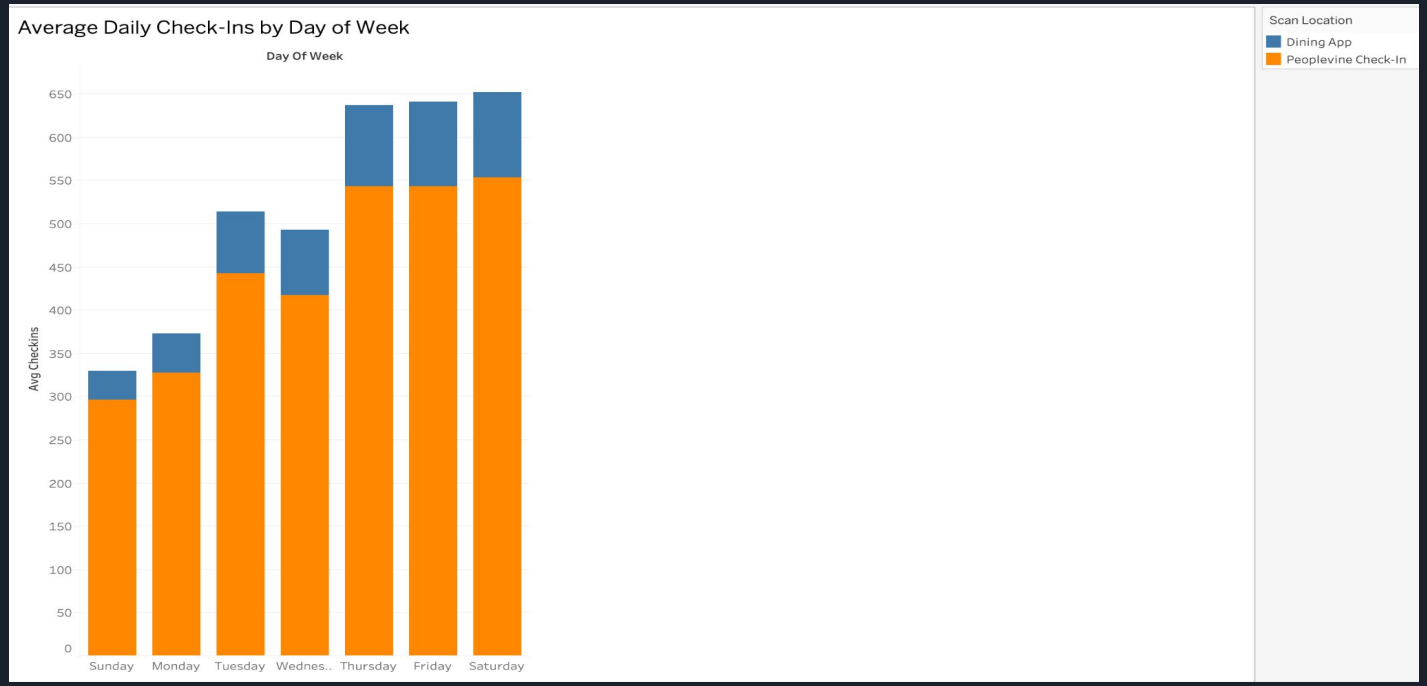
3709	John Spino	1	2025-11-01 15:14:33

Daily Averages

- Activity increases toward the end of the week
- Weekend shows strongest engagement
- Midweek presents opportunity for increased engagement



Key Insights

- Member activity peaks in evening hours and weekends
- Dining App usage is a strong indicator of revenue-driving behavior
- Member engagement varies significantly across individuals
- Opportunities exist to increase midweek engagement

Reccomendations

- Adjust staffing based on peak hours and days
- Implement loyalty programs for high-value members
- Create promotions for slower periods (midweek)
- Target at-risk members with re-engagement strategies
